

What is COACH BIO ENERGY ?

COACH BioEnergy is a European project that supports the efficient and sustainable use of biomass for energy purposes.

COACH BioEnergy represents a network of highly regarded universities and institutions committed to different aspects of biomass and its energy transformation. To ensure the demand-specific information delivery the network also comprises consulting bureaus in several regions.

COACH BioEnergy's major goal is to adapt and spread scientific findings and technological innovations in a way that they meet practical demands of decision makers and other beneficiaries. The network will prevent valuable information on bioenergy from remaining unused.

Why COACH BIO ENERGY ?

COACH BioEnergy will bundle numerous information sources for different important aspects of bioenergy, mainly related to:

- Biomass production and harvesting processes
- Technologies of energy transformation of biomass
- Logistics and relevant transportation chains
- Ecological and socio-economic aspects of biomass production and biomass processing

The network's broad information and knowledge base will reflect current scientific findings, state-of-the-art technical information as well as expert evaluations related to socio-economic and political developments.

Biomass

- a valuable energy source!

Biomass is everywhere around us
- and it is valuable.

Biomass is a renewable source of energy.

Biomass helps to protect the environment.

Biomass furthermore ...

- ... is commonly available.
 - ... is a local product.
 - ... can be used locally.

The use of biomass for energy supports local and regional development!

Get the full range of information on sustainable biomass utilization.

Use the easy access to invaluable expertise.

COACH BioEnergy supports your work.

COACH BioEnergy paves the way to sustainable investments.
